

Assignment-1 Session Fall 2023

Course Code – Title: CSC350 – BSSE	Dated: October 15, 2023
Instructor: Mr. Aamir Shabbir Pare	Due Date: October 25, 2023
Maximum Marks 20	Time Allowed: 1 Week

CLO-1: Describe advanced concepts and technologies for developing web applications.

As we talked about, during earlier lectures, throughout the course of this semester you'll build a working application on the MEAN stack, called VehiclePark. VehiclePark registers the presence of a vehicle at a single click and lists all the vehicles of employees at Park. It will provide a quick searching vehicle feature and also displays reports, vehicle entry and outgoing times on daily, weekly or monthly basis. The application VehiclePark will also have administration features.

To begin this journey of building a working MEAN stack application, you are required to prepare a very basic application requirements document along with application plan at a high level as your first assignment.

Note: This is absolutely a course instructor's idea bases on his own real experience of daily vehicle parking observation, not restricted to follow, you can bring your own idea for developing a real- world working application that facilitates the society by any means.

Wish you good Luck and see you soon in the next brand-new assignment!
